Dear Sir,

the City of Prague has been operating the "TETRA City Radio System" - Motorola Dimetra IP Scalable (DIPS) version R8.1 since 2013 (hereinafter "MRS TETRA"). The current system had been supplied by company KonekTel, a. s., with its registered office at Pražská 152, 530 06 Pardubice, Czech Republic (hereinafter "KonekTel").

The City of Prague is planning to extend MRS TETRA, mainly to increase the coverage of the geographic area by radio signal by adding and installing new MTS2 base stations, adding Authentication & Provisioning Center (AuC / PrC) and Air Interface Encryption TEA 1 (AIE), adding and installation of new MCC7500 Dispatching Centers, including CCGW Analog Interfaces (hereinafter "components DIPS").

I am asking you whether it is possible to expand MRS TETRA by purchasing the above-mentioned DIPS components from another Motorola Solutions distributors located either in the Czech Republic or in the European Union, other than KonekTel, and consequently require only the integration and installation of the DIPS components by KonekTel based on existing service agreement between the City of Prague and KonekTel.

Sincerely,

  
Ing. Robert Fialka  
Director Department IT  
City Hall of Prague
